

Pegasus Data Center Services offers comprehensive data center cleaning services, so you have the peace of mind to focus on keeping your data center running with 100% uptime.

Pegasus Data Center Cleaning Services helps major data center operators across the U.S. keep their facilities clean and contamination-free—resulting in reduced costly downtime. Expertly trained specialists clean all types of environments, ranging from call centers and command centers to web hosting, data processing, collocation and telecom facilities. Specialty data center services include:

- » General cleaning
- » Subfloor cleaning
- » Post-construction cleaning
- » Equipment surface cleaning
- » Subfloor sealing and encapsulation
- » Environmental sampling and reporting
- » Disaster recovery cleaning
- » Anti-static floor care and monitoring
- » Green Seal certified and chemical usage

Specialized Cleaning After Installation

Post-construction cleaning takes place after the installation of all flooring and equipment. A thorough process is necessary to keep the room free from harmful dust and contaminants. This guarantees that equipment in your new or upgraded data center continues to function at peak efficiency, without the risk of costly downtime. Our post-construction cleaning services include the use of:

- » Microfiber cleaning cloths and microfiber mops that use fewer chemicals and remove more surface particles
- » High-filtration shop vacuums for drywall and fine dust
- » HEPA-grade vacuums for final cleaning of all surfaces
- » Durable, environmentally preferable Green Seal certified hard-floor seals and finishes to increase time intervals between finishing and stripping

Using innovative technology and advanced cleaning processes, our skilled professionals ensure your data center environment exceeds the industry's highest standards for contamination control, maintenance and safety.
